

Drop Table Grades

9/19/24 Notes

What needs to get done:

- Login -> focus on doing so after midterm presentation
- HTML (UI)
- JQuery/JavaScript
- Personality/Matching Quiz
- Search system
- Matching system -> focus on doing this after midterm -> if we have time
- Pages:
 - Home page
 - Login
 - Sign up
 - Roommate finding/search/filtering
 - Some backend can't be "faked" for this (filter system)
 - User profile
 - House profile
 - Messaging (maybe)

Possible other meeting time:

- Wednesday at 7PM
- Sunday evenings (possible 7PM as well)

Course of action:

- Divvy up various HTML pages to work on
- For now: only work on the HTML/layout/visuals- focus on JQuery and JavaScript when done
- Not leave work to the last minute D:
 - Weekly deadlines/check ins
- Use GitHub projects to layout the plan
- Focus on making a frontend for now
 - Look at the wireframes
- Not sure how long working on frontend is gonna be- see how long things take + workload from labs and other classes and see how it is

Other Ideas:

- Dynamically updating site (with new entries/possible roommates)
 - JSON or SQL
- Requirements:
 - PHP
 - MariaDB
 - JavaScript
 - (other usual offenders- HTML, CSS, etc.)
